

# Delegate Support Q&A to my agent

James Su

# Situation

Support asks me questions on Slack:

- Is it a bug?
- How does the feature work?
- If I change this, will that happen?

# Solution

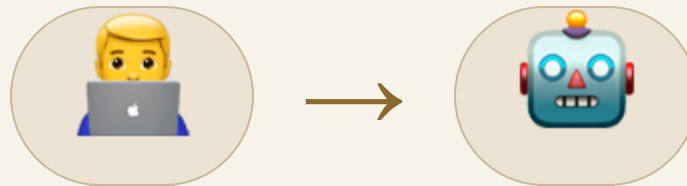

- I know the answer: typing the answer on Slack directly.
- I don't know the answer: run an agent on my machine and copy-paste the answer to Slack.

# Problem

I'm happy to help, but context switching is expensive.

# Idea

Run an agent on my machine when \_\_\_\_ gets a message on Slack

# Research

- Slack: [Chat SDK](#)
- Agent: [Pi SDK](#)

# Why Chat SDK?

- Support various messaging platforms with [unified APIs](#)
- Slack is fully supported according to [feature matrix](#)
- Easy to develop using the [chat-sdk skill](#)

# Why Pi SDK?

- Already using Pi on my machine
- Pi exposes the same APIs it uses internally to build AI applications

# Demo

<https://github.com/goofansu/pi-chat>
